IPv6 Address:	NR-0000 0000 0000 0110 018 046: 348	H
	Configure IPv6	0

Click TCP/IP, and then use the Configure IPv4 pop-up menu to make the following adjustments:

- DCHP must be set to "automatic"
- DHCP Client ID you must write here your student ID. It MUST be filled, otherwise your Mac will NOT connect anywhere thru the Optometry School LAN.
- An IP Address starting with "169." is *not* a valid IP address on the LAN it's self-assigned, and means there is a problem.
- This change is required, due to changes in Apple's Software Security, not in the Optometry School LAN configuration.

NOTE: After you have configured the Ethernet settings, select AirPort. Verify the AirPort (at least for the WIFIOPTO network) is configured the same way as the Ethernet settings.
